

CMC GAP ASSESSMENT

Product and scope

Drug X 100 mg immediate-release tablet is a hypothetical wrapper for the existing FORGE synthetic fixtures. The fixtures contain analytical parameters only; they do not establish the tablet formulation or a commercial specification.

Portfolio boundary

Independent Portfolio Exercise. Synthetic Product Data. Not a Commercial Submission. Not Regulatory Advice. Not Evidence of Commercial CMC Experience.

Sources reviewed

SYN-COA-A.json: batch SYN-A, assay 98.6%, water 0.3%, impurity 0.08%. SYN-BATCH-A.json: batch SYN-A, assay 99.1%. SYN-COA-B.json: batch SYN-B, assay 986 mg/g, water 0.4%, impurity 0.09%. Source values and method IDs are synthetic.

Available information

The saved fixture retains parameter, raw value, unit, method, batch, synthetic limits and mass basis. 986 mg/g is arithmetically equivalent to 98.6% on the stated mass basis; comparable method/sample context still requires review.

Current decision

HOLD / REVIEW REQUIRED. Same-batch assay records disagree by 0.5 percentage points. Neither value is accepted simply because it lies inside the illustrative limits.

CMC GAP ASSESSMENT / 2

Assessment register

Each row preserves the observation and next action. Module 3 mapping is a candidate, not confirmed dossier applicability.

Item	Source Status	Observation	Gap / Conflict	Module 3 Area	Why It Matters	Recommended Action	Review Status
Assay	Two records	98.6% / 99.1%, SYN-A	Same batch mismatch	P.5.4 candidate	Wrong result in draft	Reconcile originals	HOLD
Methods	IDs only	HPLC / KF labels	Procedure / validation absent	P.5.2 / P.5.3	Method support missing	Obtain reports	REVIEW REQUIRED
Stability	Absent	No timepoints	Shelf life unsupported	P.8 candidate	No stability conclusion	Obtain protocol / results	HOLD
Composition	Absent	Hypothetical tablet	No formula / process	P.1 / P.3	Scope incomplete	Obtain records	HOLD

Assay conflict | 3.2.P.5.4 candidate

Source status: two synthetic records available. Observation: SYN-A assay 98.6% versus 99.1% under HPLC-SYN-01. Gap/conflict: identity, sample and authoritative result unresolved. Why it matters: an unreviewed batch-analysis statement could misstate the result. Action: inspect originals, sample IDs, calculation records and authorized corrections. Review status: HOLD.

Analytical methods | 3.2.P.5.2 / 3.2.P.5.3 candidates

Source status: method identifiers only. Observation: HPLC-SYN-01, HPLC-SYN-02 and KF-SYN-01 are labels, not procedures or validation. Missing: method conditions, suitability, validation and authorized acceptance criteria. Action: obtain actual method and validation evidence. Review status: REVIEW REQUIRED.

Stability | 3.2.P.8 candidate

Source status: absent. No storage conditions, timepoints, trend data or justified shelf life. Why it matters: no defensible stability conclusion. Action: request stability protocol and results. Review status: HOLD.

Composition and manufacture | 3.2.P.1 / P.3 candidates

Source status: absent. Drug X strength is hypothetical; excipient composition, manufacturing process and controls are not supplied. Action: request authorized composition and manufacturing records. Review status: HOLD.

CMC GAP ASSESSMENT / 3

Controlled workflow

Original source -> source-linked fact -> available information -> missing information -> conflict -> candidate Module 3 location -> independent QC -> human review -> HOLD -> controlled candidate output.

Quality checks

Compare raw numbers, units, batch IDs and source coordinates. Do not treat unit conversion as scientific equivalence. Keep unsupported statements outside accepted draft content.

Human decision

Qualified CMC / RA / QA professional review remains required. Recommended decision: keep the assay statement on HOLD and request reconciliation. No completed professional review or accepted output is claimed in this document.

Controlled output

A gap assessment can be communicated with its limitations. A release-ready Module 3 section cannot be asserted from these fixtures. Decisions in the public demo are session-only illustrative records; private workspaces retain authorized saved history.
